NOTE: BEFORE USE, FOLLOW INSTRUCTIONS IN THIS MANUAL TO RESET AND HIDE THE RED COLOR INDICATOR.

This lock is preset with the red indicator in the elevated position, but before use, you must return the red indicator to the hidden position by following the easy steps here in this manual.

Your new resettable combination lock is preset to open at 0-0-0 (even though dials may be positioned at other numbers).

To set your own combination:

**Step 1:** Turn the dials and align the numbers to 0-0-0.

**Step 2:** Pull up the shackle and turn it 90° counter-clockwise to align the projection on the shackle with the notch on the lock body.

**Step 3:** Press the shackle down firmly while turning the dials to reset your own combination.

**Step 4:** Lift shackle and return the shackle back to the original position. Rotate dial to lock.

Your personal combination is now ready to use.

**Indicator Feature:**
This lock has a special color indicator to alert you that the lock was opened by another person.

The hidden color indicator will be shown once the U.S. Customs screeners open the lock with their specific access tool.

**To reset & hide the red indicator:**
To return the red color indicator back to its original hidden position, simply push it back into the lock body with a small pin-like device, such as a paper clip. The TSA color indicator is now reset.

Keep your combination in a safe and accessible place for future reference.
